

Number of patients on the current caseload of the trusts adult ADHD team as at 1 June 2025

2594

What percentage of ADHD patients are prescribed stimulant medication?

Although the clinical system may allow us to record the medications prescribed in progress notes, it can not be easily extracted from the system and validated.

How many ADHD patients have stopped taking stimulant medication since 2020?

Please specify how many patients stopped because of side effects they were experiencing and make a brief note of the side effect

Although the clinical system may allow us to record the medications stopped because of side effects in progress notes, it can not be easily extracted from the system and validated.

Since 2020 how many ADHD patients were prescribed non-pharmacological treatment?

This could include Cognitive Behavioral Therapy, parent of family training, neurofeedback or advice and programs related to mindfulness and yoga. Please specify what the treatment was.

Patients are referred to our trust adult ADHD team for a diagnostic assessment of ADHD and for medication reviews. Therefore the interventions requested aren't provided. There may be patients in our trust who receive the interventions with other mental health teams, however we are unable to identify if the interventions are provided in response to a patient having ADHD or another condition.
